## Module 8: Anxiety and Depression

---

Now, I am going to ask you some questions about your mood. When answering these questions, please think about how many days each of the following has occurred in the past 2 weeks.

1. Over the last 2 weeks, how many days have you had little interest or pleasure in doing things?

- 8  01-14 days
- 7  None
- 7  Don't know / Not sure
- 9  Refused

2. Over the last 2 weeks, how many days have you felt down, depressed or hopeless?

What's NEW

- CHIS 2005 Begins Data Collection July 2005
- Community Groups in California Invited to Attend AskCHIS Training Workshops for Their Data Needs Summer 2005

**The K6 questions will include:**

1. The next questions are about how you have been feeling during the past 30 days. About how often during the past 30 days did you feel nervous — would you say all of the time, most of the time, some of the time, a little of the time, or none of the time?
2. During the past 30 days, about how often did you feel hopeless — all of the time, most of the time, some of the time, a little of the time, or none of the time?
3. During the past 30 days, about how often did you feel restless or fidgety? (IF NEC: all, most, some, a little, or none of the time?)
4. How often did you feel so depressed that nothing could cheer you up? (IF NEC: all, most, some, a little, or none of the time?)
5. During the past 30 days, about how often did you feel that everything was an effort? (IF NEC: all, most, some, a little, or none of the time?)
6. During the past 30 days, about how often did you feel worthless? (IF NEC: all, most, some, a little, or none of the time?)

In addition to these questions administered to adults, **CHIS 2005 interviews with adolescents and with parents of children will include age-appropriate measures of emotional health and development.**

[http://www.dmh.ca.gov/SADA/SDA-Prevalence\\_Rates.asp](http://www.dmh.ca.gov/SADA/SDA-Prevalence_Rates.asp)

### Prevalence Data

The prevalence data shows the number of youth who have serious emotional disturbances (SED) and the number of adults who have serious mental illnesses (SMI). The original prevalence rates were developed through a contract with Dr. Charles Holzer, Ph.D., an epidemiologist at the University of Texas, Medical Branch. He has worked at the national and state levels on issues relating to epidemiology of mental illnesses for over 30 years. His methodology uses information from the Epidemiological Catchment Area (ECA) studies, the National Co-Morbidity Study (NCS), and rates of SED for youth published in the Federal Register based on a compilation of prevalence studies for youth ages 9 through 17 years. He applied these rates to all youth. The prevalence rates of SMI and SED were applied to each county based on the demographic characteristics that correlate with differential rates. Further information is available at the following site: <http://psy.utmb.edu/estimation/estimation.htm>

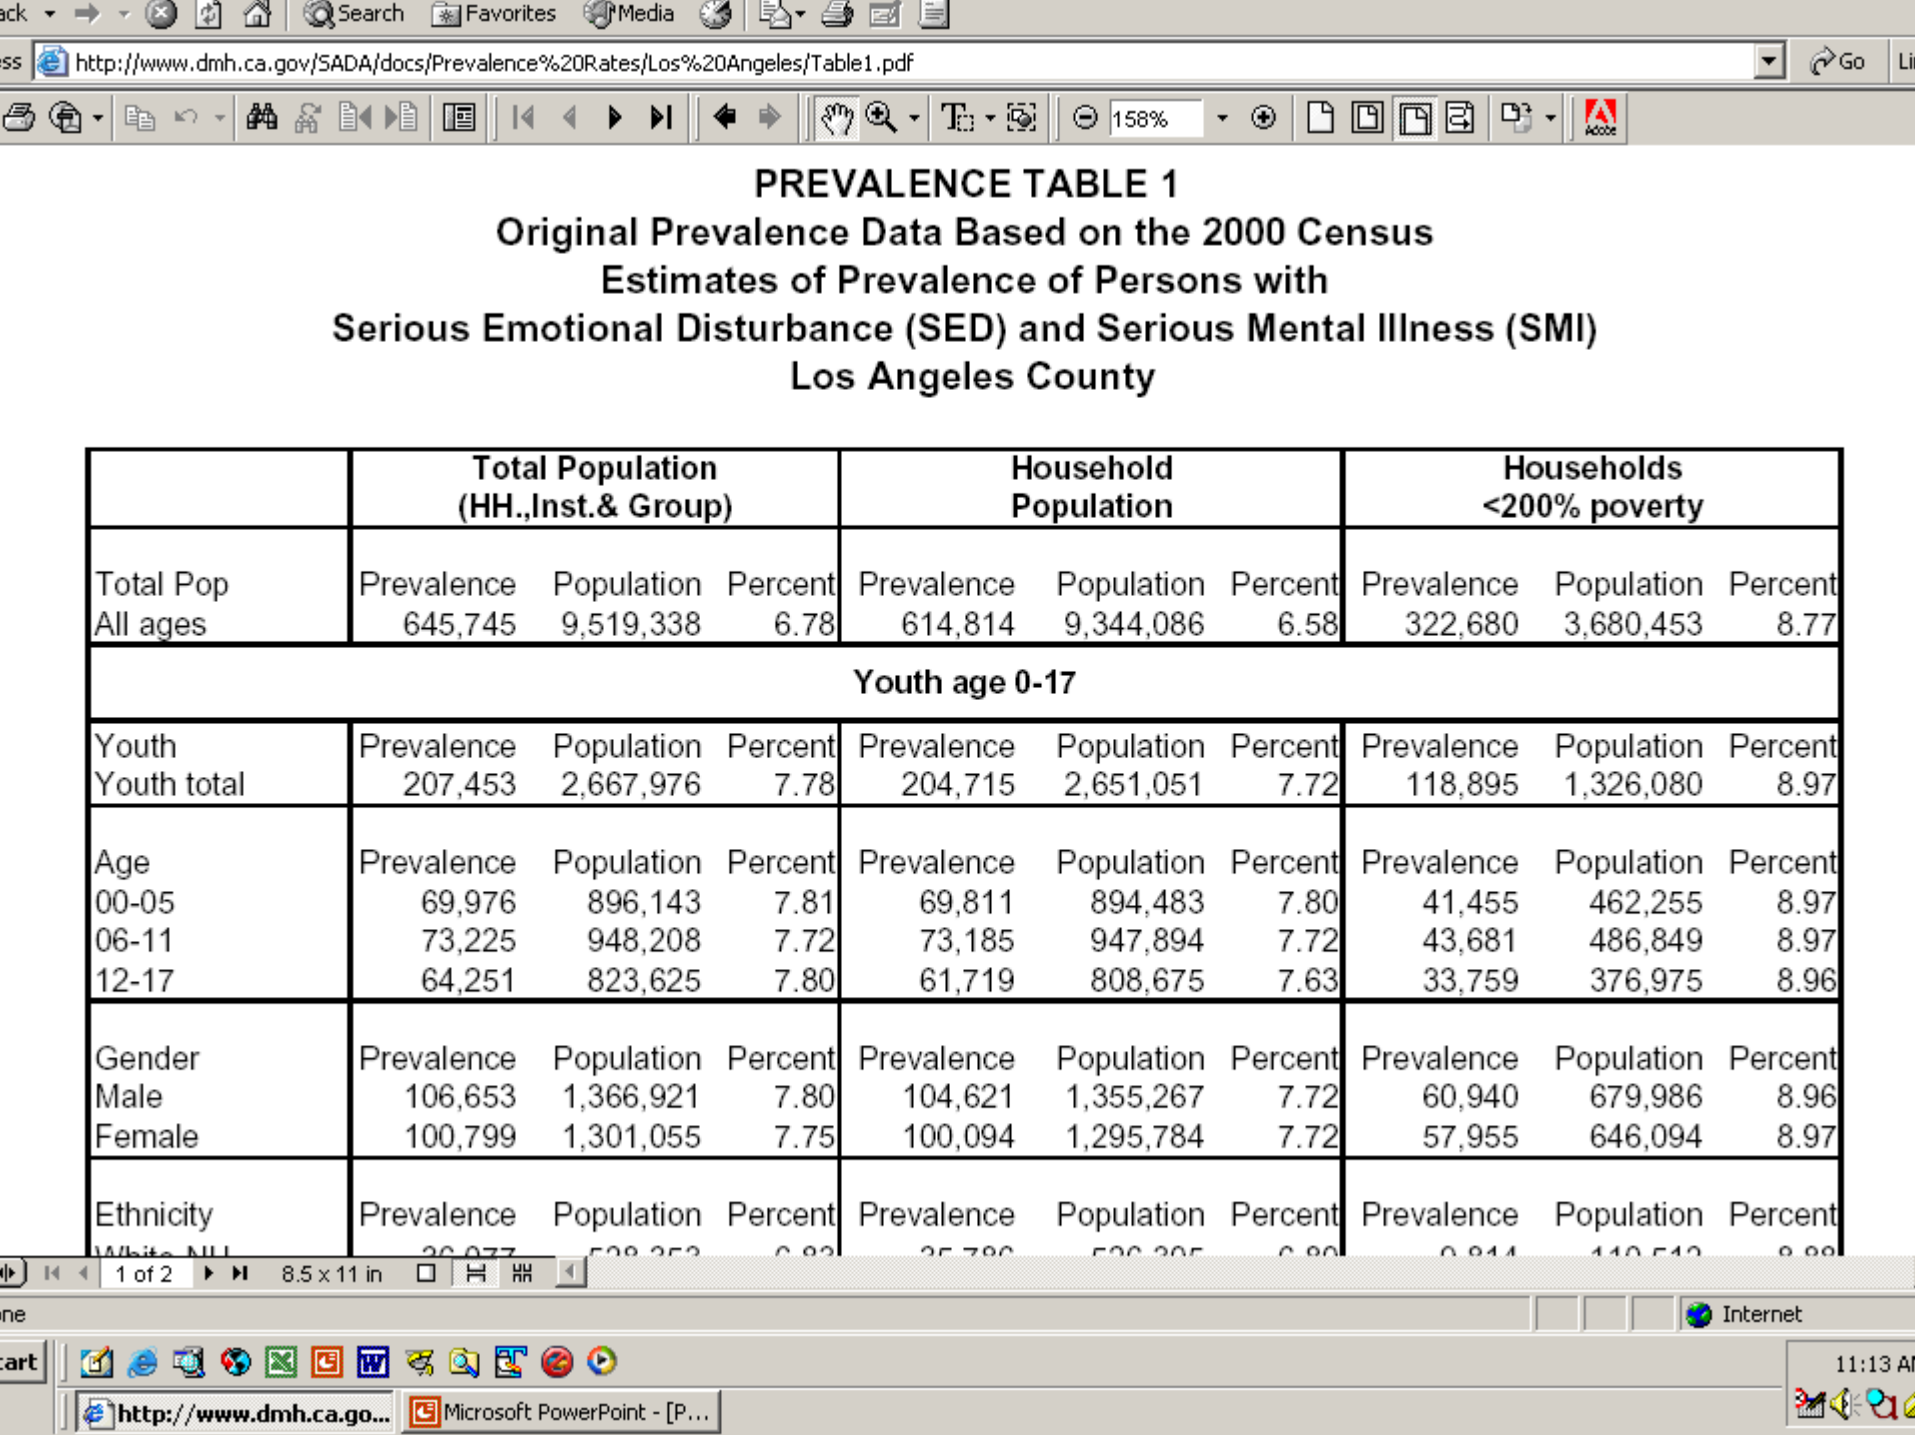

Prevalence Table 1 shows the original data that was provided by Dr. Holzer. The table shows the estimated prevalence, the total population, and the prevalence rate for three population groups: (1) the total population in the state or county; (2) the persons in households; and (3) the persons in households with an income below 200 percent of the poverty level. Since the public mental health system is intended to serve those persons who have low resources, the population below 200 percent of the poverty level can be used for planning purposes as the population that would be likely to use the public mental health system for services, if needed.

There are some limitations in using only the household population since some of the mental health client population is in skilled nursing facilities, residential treatment facilities, or board and care homes that are not considered households. However, the Census data are not available in sufficient detail to identify only those facilities. In addition, the Census data would not identify those persons who are placed out of county. There is a Census report that is available by county showing the total number or persons in "institutional and group quarters" by type of residence. This report can be referenced at the following website <http://www.dof.ca.gov/search/demograpquery.htm>.

Prevalence Table 2 focuses on the household population below 200 percent of poverty. The first three columns of data are the same as those on the original data showing the population and prevalence based on the 2000 Census. The last three columns are an update to this data reflecting the growth in population to 2004. The population and prevalence numbers in the first two data columns are increased by the growth rate specific to each county. The total prevalence rates stay the same.

There are limitations to this methodology in that some age groups and race/ethnic groups have higher rates of growth than others. However, these growth rates are not available in sufficient detail to apply them to the original data tables.

**HEALTH INFORMATION**

[Other Disorders](#)

Researchers supported by the National Institute of Mental Health (NIMH) have found that half of all lifetime cases of mental illness begin by age 14, and that despite effective treatments, there are long delays — sometimes decades — between first onset of symptoms and when people seek and receive treatment. The study also reveals that an untreated mental disorder can lead to a more severe, more difficult to treat illness, and to the development of co-occurring mental illnesses. [more >>](#)

**Statistics & Data Analysis (SDA): Prevalence Rates of Mental Disorders Updated October 2004**

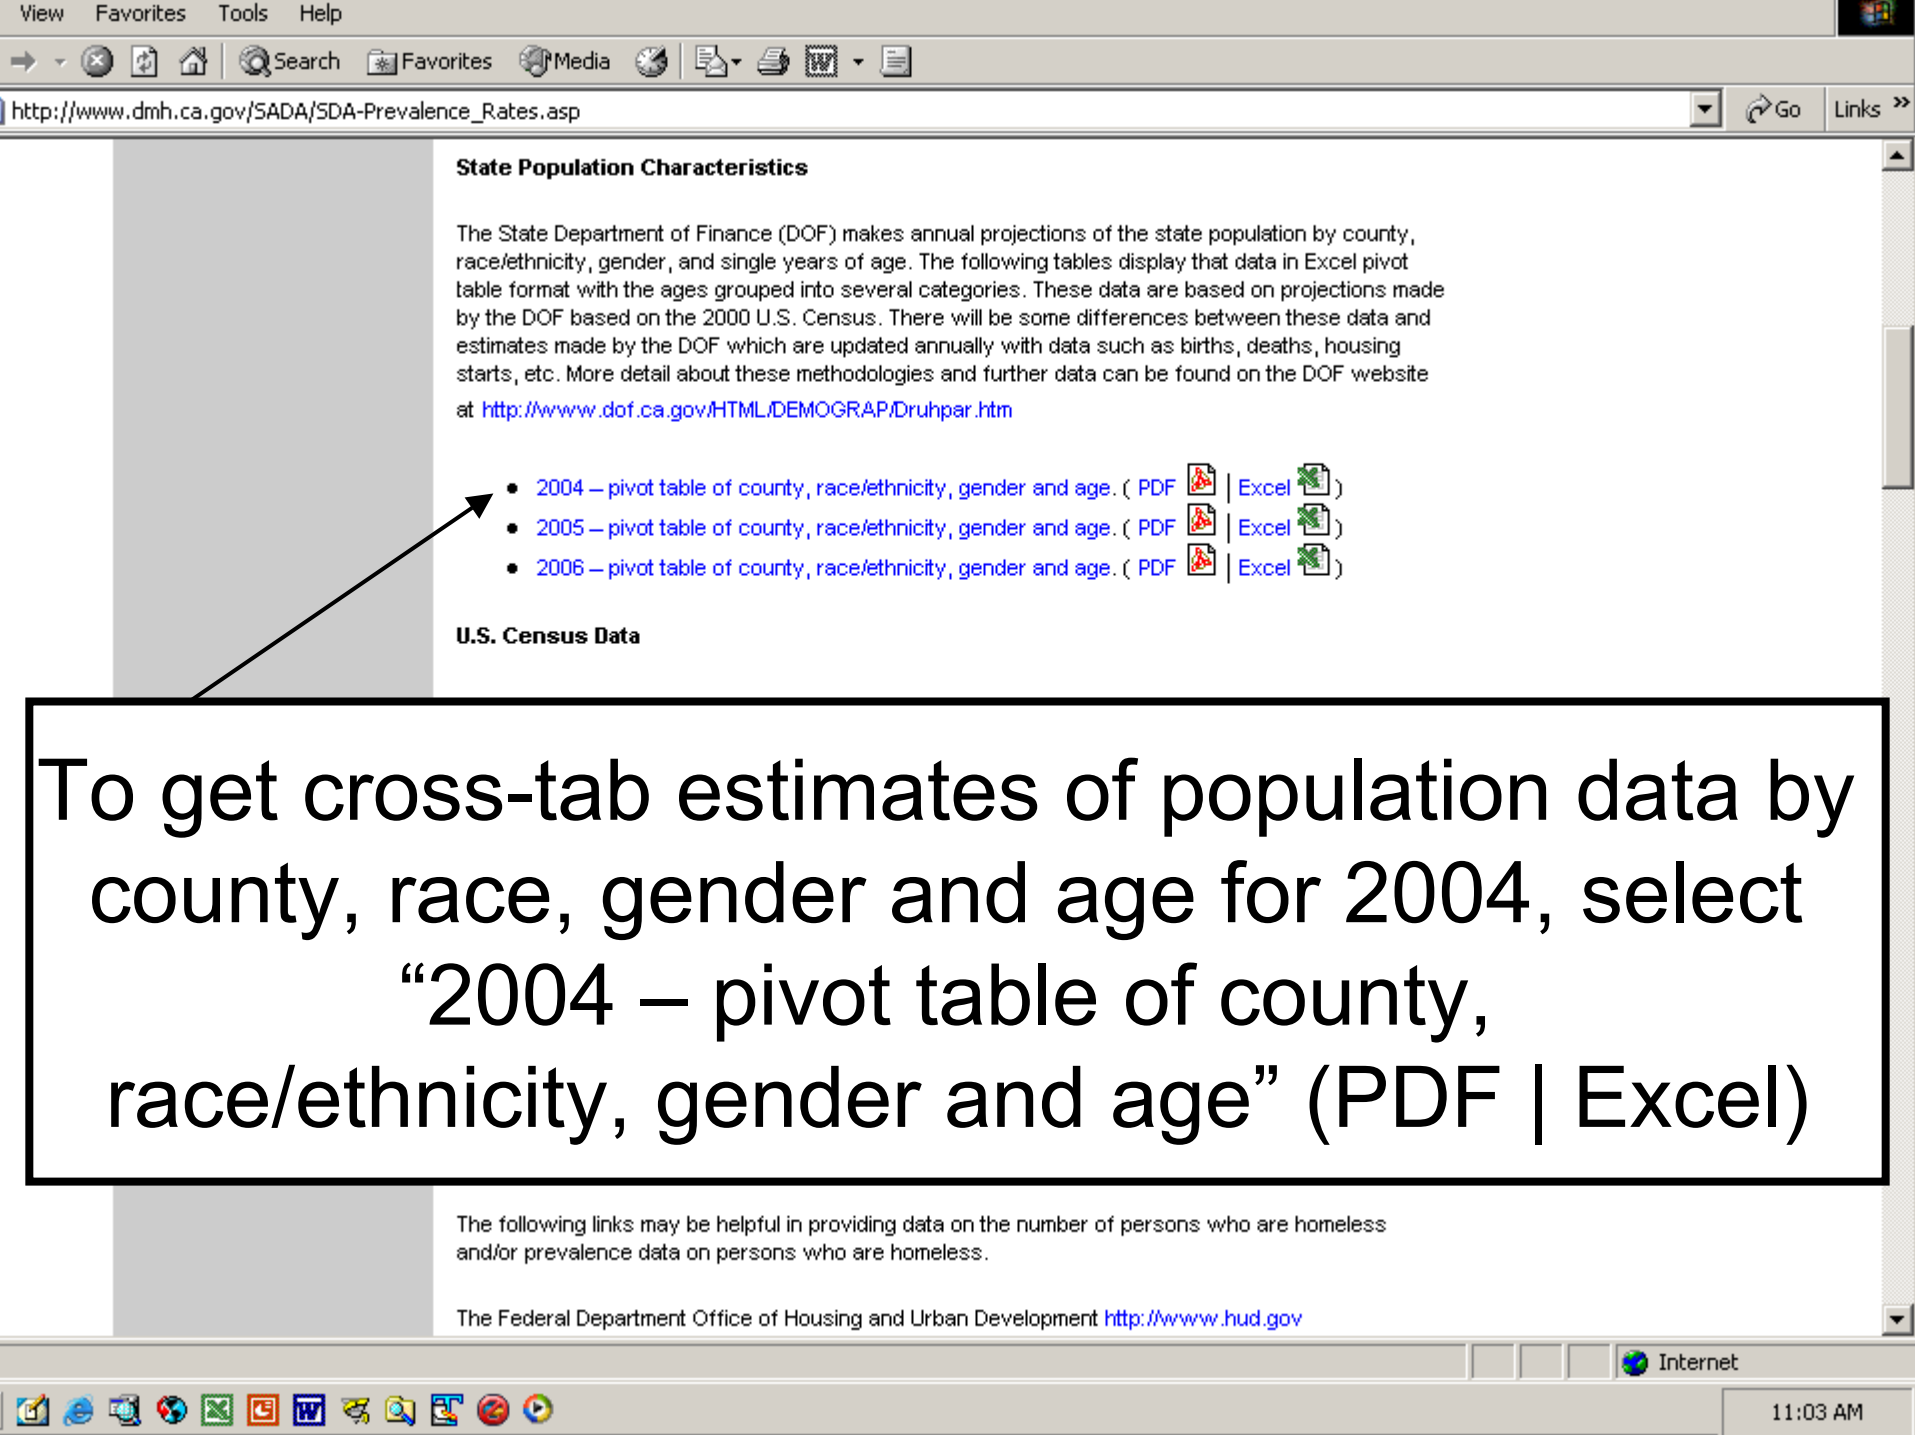

This file contains several documents to assist counties in planning to provide mental health services to their populations. The file contains prevalence rates of mental disorders by county based on the 2000 Census and updated to 2004, and state and county population trends from 2000 to 2004.

**Population Trends**

The Population Trends Tables 1 and 2 are from the State Department of Finance (DOF) and show the total population by state and county from 2001 through 2004. The data are based on the 2000 Census. The data are available from the DOF at the following site:  
[http://www.dof.ca.gov/HTML/DEMOGRAP/Hist\\_E-4.xls](http://www.dof.ca.gov/HTML/DEMOGRAP/Hist_E-4.xls)

Population Trends Table 1 is the same as that on the DOF website with the addition of the last column that shows the percent change in the population from the 2000 Census to 2004. This percent is used

State Dept. of Finance uses Census 2000 to estimate state population figures for 2001 - 2004

### State Population Characteristics

The State Department of Finance (DOF) makes annual projections of the state population by county, race/ethnicity, gender, and single years of age. The following tables display that data in Excel pivot table format with the ages grouped into several categories. These data are based on projections made by the DOF based on the 2000 U.S. Census. There will be some differences between these data and estimates made by the DOF which are updated annually with data such as births, deaths, housing starts, etc. More detail about these methodologies and further data can be found on the DOF website at <http://www.dof.ca.gov/HTML/DEMOGRAP/Druhpar.htm>

- [2004 – pivot table of county, race/ethnicity, gender and age.](#) ( PDF | Excel )
- [2005 – pivot table of county, race/ethnicity, gender and age.](#) ( PDF | Excel )
- [2006 – pivot table of county, race/ethnicity, gender and age.](#) ( PDF | Excel )

### U.S. Census Data

The following links may be helpful in providing data on the number of persons who are homeless and/or prevalence data on persons who are homeless.

The Federal Department Office of Housing and Urban Development <http://www.hud.gov>

To get cross-tab estimates of population data by county, race, gender and age for 2004, select “2004 – pivot table of county, race/ethnicity, gender and age” (PDF | Excel)
